

## Features of FonesVisuas Test

### Understand the Risk of Diseases in the future and Current Body Condition.

The test offers prospects of future health risks and the current body condition by using technology that analyzes 7,000 proteins from a small blood sample, coupled with the advanced big data analysis and ICT technology of the NEC Group.

### Only a small blood sample needed, no diet limits, done swiftly.

The test is harmless to human body as it only needs a small blood sample and does not require any special preparations, such as dietary restrictions.

### Highly Recommended for

- ✓ Individuals with a family history of diseases, such as stroke or myocardial infarction, and who have concerns for their own health.
- ✓ Individuals who have suffered a myocardial infarction, stroke, heart failure requiring hospitalization, diabetes, or chronic kidney disease.
- ✓ Individuals affected by direct or secondhand smoke, and who concern about the risk of lung cancer.
- ✓ Individuals who want to extend their healthy lifespan and maintain independent living in the old age.
- ✓ Individuals worried about their family's health while also concerned that the medical screening tests might have potential risks or drawbacks.
- ✓ Individuals who want to adopt healthier lifestyle habits by knowing the diseases they may be at risk of.

- This test assesses various risks based on analysis of data from specific groups. The disease risk prediction for the 'risk of developing dementia within 20 years' is for individuals aged 49 and above who have not been diagnosed with dementia. The 'risk of developing dementia within 5 years' is for those aged 65 and above who have not been diagnosed with dementia. The 'risk of developing myocardial infarction or stroke within 4 years' is for individuals aged 40 and above. The 'risk of developing lung cancer within 5 years' is for individuals aged 50 and above with a history of smoking who have not been diagnosed with cancer yet. The 'risk of developing Chronic Kidney Disease within 4 years' is for individuals aged 23 and above. The assessment of 'bodyscan' is based on data from individuals aged 18 and above.
- Test Results for Individuals with systemic lupus erythematosus (SLE) may not be able to be generated.
- Individuals with chronic kidney disease and those aged 75 and above may not receive accurate test results for any items except for the risk of myocardial infarction and stroke within 4 years.
- This test is not applicable for individuals under the age of 18 or pregnant people.
- The results of this test cannot be used for the diagnosis, treatment, or prevention of diseases without a physician's judgement.
- This test predicts future health risks and is not intended for diagnosing individuals who already have the disease or determining the status of its progression.
- This test does not guarantee the accuracy of its results or the provision of results equivalent to other testing methods
- This test is not covered by health insurance. Please inquire with the medical institution regarding the test cost.

Chronic Kidney Disease

Technology of measuring around 7,000 proteins

1<sup>st</sup> in the world<sup>\*\*</sup>

<sup>\*\*</sup>This breakthrough is made possible by the pioneering technology from US-based company SomaLogic, which analyzes around 7,000 types of blood proteins.

# FonesVisuas Offers Prospect of Future Health Risks and Current Body Condition

## Test Result

### Risk of Cardiovascular Disease in 4 years

Severe after-effects can sometimes occur following a CVD event.

### Risk of Dementia within 20 years/5 years<sup>※</sup>

Including alzheimer's type, lewy body type and vascular dementia.

<sup>※</sup> The risk of dementia within 5 years is measured for individuals above 65 years old.

### Risk of Chronic Kidney Disease in 4 years

There are no early warning signs until CKD is severe.

### Risk of Lung Cancer in 5 years

Lung cancer has the highest mortality rate among cancers.

Additionally, the following items that cannot be easily detected by a regular checkup:

**Glucose Tolerance, Liver Fat, Alcohol Impact, Cardiorespiratory Fitness, Visceral Fat, and Resting Energy Rate**

## Steps for FonesVisuas Test

### Step 01

#### Appointment

Contact the hospital to schedule an appointment if you have any inquiries regarding the FonesVisuas Test.

### Step 02

#### Consultation

Receive a consultation regarding FonesVisuas Test. Blood sample will be simply collected at the hospital if you decide to proceed.

### Step 03

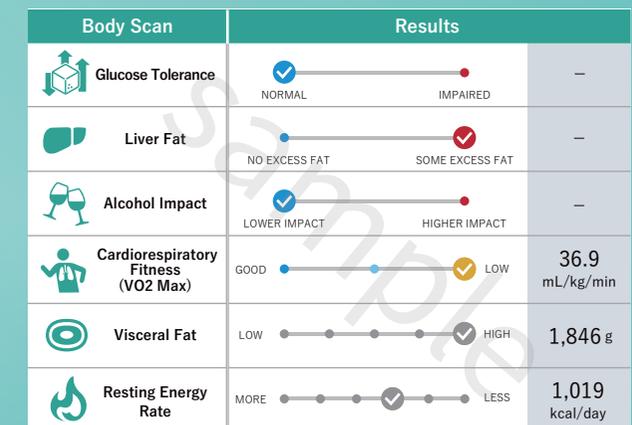

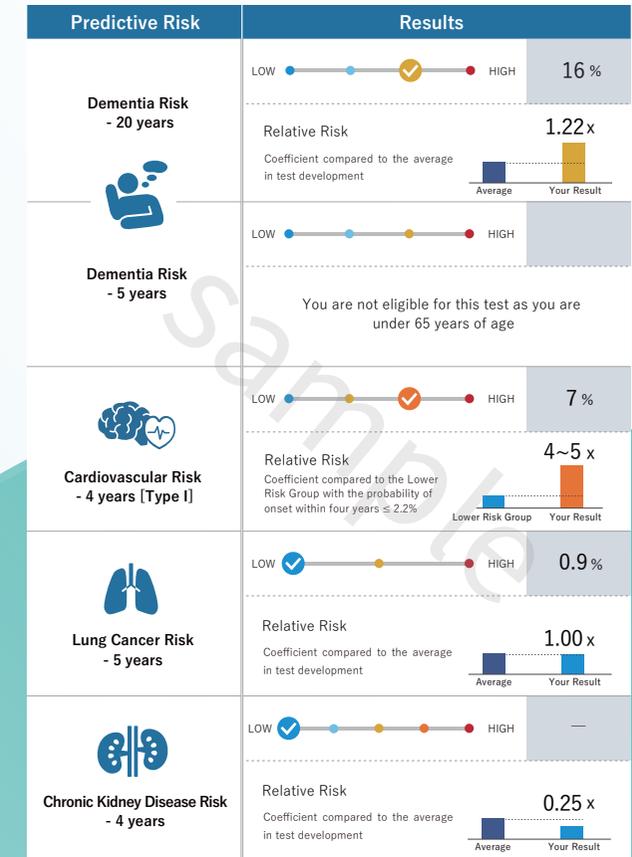

#### Results Receipt

You will receive a test result report providing insights into current health indicators and potential future risks.
